

Eezi Quartz is easy-going and doesn't need a lot of attention to keep its good looks.

To clean Eezi Quartz:

- use warm water and a mild detergent, or a spray-and-wipe-type cleaner for the best results.
- Unlike marble and granite, Eezi Quartz doesn't need sealing.
- If you need more than a mild detergent to get rid of stubborn marks use a nonabrasive cream cleanser, such as liquid Chemico, and a non-scratch pad.
- Always rinse with clean water to remove any residue.
- Eezi Quartz is quite heat resistant, beating most man-made surfaces and even marble and limestone. Anything below 100°C should not damage the material, however Eezi Quartz can burn or warp if exposed to sudden high temperature changes.
- Because it's better to be safe than sorry, we recommend that hot pots and pans never be placed directly on the surface.
- Rather use a hot pad or trivet on the surface and under cooking units such as electric frying pans, crock pots, or roaster ovens.
- Eezi Quartz can be permanently damaged if it's exposed to unduly strong chemicals and solvents.
- Never clean your Eezi Quartz countertops with products that contain trichlorethane or methylene chloride, often found in paint removers.
- Rather avoid using aggressive cleaning products like oven cleaners and dishwasher cleaning agents. Products that contain oils or powders may leave a residue and should be rinsed off thoroughly. If your countertops accidentally get exposed to any of these damaging products, rinse immediately with clean water to neutralize the effect.
