

CARE AND MAINTENANCE

WHAT IS THE BEST WAY TO CLEAN PRO QUARTZ?

- ProQuartz quartz products are twice as strong as granite, because they are industrial products strengthened by the processing technology undertaken.
- Resins are susceptible to sun damage and may fade.
- To retain their aesthetic appeal, simply wipe the work tops with warm water and a mild non-abrasive cleanser and rinse with clean water.
- ProQuartz quartz surfaces require minimal maintenance. They are hard and non-porous and require no sealing to retain their shine and brilliance.
- For tough stains, moisten a clean cloth with a non-abrasive cleaner and rub it into the stain, wipe and clean with a moist cloth to remove the cleaner residue.
- ProQuartz is structurally more resistant to heat than other surfaces. However, like any other stone tops, excessive heat and thermal shock may cause damage. We recommend the use of a folded cloth, a wooden board or a trivet when placing a hot cooking pan or other cooking units on the surface.
- ProQuartz is substantially harder than natural stone and highly resistant to scratching. However, avoid using sharp objects such as sharp knives or screwdrivers directly onto the surface.
- Do not use cleaners that contain Pine Oil. If not thoroughly rinsed, these products can leave behind a residue of pine oil. The pine oil then attracts and holds dirt on the surface, eventually reducing the cleanliness of the surface and its appearance. Highly aggressive cleaning agents such as oven/grill cleaners and dishwasher polishing agents that have high alkaline/pH levels (pH 8.5 or higher) should also be avoided, as should abrasive scrubs/cleaners be containing either soft or hard abrasive particles. Do not use cleaners that contain xylene, toluene, potassium hydroxide or caustic soda. Do not use paint removers or furniture strippers that contain trichloroethane or methylene chloride.
